Report on Application of Nanotechnology and Nanomaterials in Concrete

Copyright by the American Concrete Institute, Farmington Hills, MI. All rights reserved. This material may not be reproduced or copied, in whole or part, in any printed, mechanical, electronic, film, or other distribution and storage media, without the written consent of ACI.

The technical committees responsible for ACI committee reports and standards strive to avoid ambiguities, omissions, and errors in these documents. In spite of these efforts, the users of ACI documents occasionally find information or requirements that may be subject to more than one interpretation or may be incomplete or incorrect. Users who have suggestions for the improvement of ACI documents are requested to contact ACI via the errata website at <http://concrete.org/Publications/DocumentErrata.aspx>. Proper use of this document includes periodically checking for errata for the most up-to-date revisions.

ACI committee documents are intended for the use of individuals who are competent to evaluate the significance and limitations of its content and recommendations and who will accept responsibility for the application of the material it contains. Individuals who use this publication in any way assume all risk and accept total responsibility for the application and use of this information.

All information in this publication is provided “as is” without warranty of any kind, either express or implied, including but not limited to, the implied warranties of merchantability, fitness for a particular purpose or non-infringement.

ACI and its members disclaim liability for damages of any kind, including any special, indirect, incidental, or consequential damages, including without limitation, lost revenues or lost profits, which may result from the use of this publication.

It is the responsibility of the user of this document to establish health and safety practices appropriate to the specific circumstances involved with its use. ACI does not make any representations with regard to health and safety issues and the use of this document. The user must determine the applicability of all regulatory limitations before applying the document and must comply with all applicable laws and regulations, including but not limited to, United States Occupational Safety and Health Administration (OSHA) health and safety standards.

Participation by governmental representatives in the work of the American Concrete Institute and in the development of Institute standards does not constitute governmental endorsement of ACI or the standards that it develops.

Order information: ACI documents are available in print, by download, on CD-ROM, through electronic subscription, or reprint and may be obtained by contacting ACI.

Most ACI standards and committee reports are gathered together in the annually revised ACI Manual of Concrete Practice (MCP).

*Members of 236D subcommittee who drafted this report.

†Chair of 236D subcommittee who drafted this report.

Members of Committees 236 and 241 thank J. Beaudoin, M. Rahman, J. Kim, L. Brown, C. Gay, and T. Sato for their contributions to this report.

ACI Committee Reports, Guides, and Commentaries are intended for guidance in planning, designing, executing, and inspecting construction. This document is intended for the use of individuals who are competent to evaluate the significance and limitations of its content and recommendations and who will accept responsibility for the application of the material it contains. The American Concrete Institute disclaims any and all responsibility for the stated principles. The Institute shall not be liable for any loss or damage arising therefrom.

Reference to this document shall not be made in contract documents. If items found in this document are desired by the Architect/Engineer to be a part of the contract documents, they shall be restated in mandatory language for incorporation by the Architect/Engineer.

ACI 241R-17 was adopted and published January 2017.

This report presents information on nanotechnology of concrete, including recent developments related to investigation of nanostructure and nanodesign of cement-based materials, the effects of nanoparticles, field applications, and health and environmental safety concerns related to the use of nanomaterials.

Keywords: biomimicry; carbon nanofibers; carbon nanotubes; nanobinder; nanoclay; nanoindentation; nanoparticles; nanosilica; nanotechnology; nanotitanium dioxide; superhydrophobic concrete.

CONTENTS

CHAPTER 1—INTRODUCTION AND SCOPE, p. 2

- 1.1—Introduction, p. 2
- 1.2—Scope, p. 3

CHAPTER 2—NOTATION AND DEFINITIONS, p. 3

- 2.1—Notation, p. 3
- 2.2—Definitions, p. 4

CHAPTER 3—INVESTIGATION AND MODELING OF NANOSTRUCTURE AND HYDRATION MECHANISMS, p. 5

- 3.1—Investigation of nanostructure, p. 5
- 3.2—Nanocharacterization, p. 7
- 3.3—Modeling of cementitious nanostructures, p. 10

CHAPTER 4—NANOASSEMBLY AND BIOMIMETICS IN CEMENT-BASED MATERIAL, p. 10

- 4.1—Nanoparticles in polymer/cement matrix, p. 11
- 4.2—Advanced fibers, p. 11
- 4.3—Superhydrophobic concrete, p. 11

CHAPTER 5—NANOSIZED AND NANOSTRUCTURED MATERIALS IN CEMENT AND CONCRETE, p. 13

- 5.1—Application of nanoparticles, p. 13
- 5.2—Application of carbon nanotubes/nanofibers, p. 19
- 5.3—Synthesis of CNTs/CNFs on cement and cementitious material particles, p. 21
- 5.4—Nanocomposites, p. 21

CHAPTER 6—NANOMATERIALS IN CONCRETE: FIELD APPLICATIONS, p. 22

CHAPTER 7—ENVIRONMENTAL EFFECTS AND SAFETY OF NANOMATERIALS USED IN CONCRETE, p. 24

- 7.1—Nanoparticles and health effects, p. 24
- 7.2—Effects on environment, p. 24
- 7.3—Risk assessment, p. 25

CHAPTER 8—REFERENCES, p. 25

- Authored documents, p. 25

CHAPTER 1—INTRODUCTION AND SCOPE

1.1—Introduction

Nanotechnology is a multidisciplinary field of science and engineering focused on understanding and controlling matter at dimensions between 1 and 100 nanometers, where unique phenomena enable novel applications.

Nanotechnology was first introduced by Feynman (1960) and is rapidly becoming an interdisciplinary field; many developments have emerged in physics, chemistry, biology, and engineering in the study of various materials or substances at the nanoscale.

There are two main approaches in nanotechnology: 1) the top-down approach, in which larger structures are reduced in size to the nanoscale while maintaining their original properties without atomic-level control (for example, miniaturization in the domain of electronics), or deconstructed from larger structures into smaller, composite parts (top part of Fig. 1.1a); and 2) the bottom-up approach, also called molecular nanotechnology or molecular manufacturing, introduced by Drexler et al. (1991), in which materials are engineered from atoms, or molecular components, through a process of assembly or self-assembly (bottom part of Fig. 1.1a). While most contemporary technologies, including concrete, rely on the top-down approach, molecular nanotechnology holds great promise for advancement in materials and manufacturing, electronics, medicine and healthcare, energy, biotechnology, information technology, and national security.

Nanoscience and nanoengineering are commonly-used terms that describe nanotechnology applications in concrete (Sobolev and Ferrada-Gutiérrez 2005a; Scrivener and Kirkpatrick 2008; Scrivener 2009; Raki et al. 2009; Garboczi 2009). To date, nanotechnology applications and advances in the fields of construction and building materials have been inconsistent (Bartos 2009; Sanchez and Sobolev 2010; Sobolev and Sanchez 2012). Implementing nanotechnology into concrete on a commercial scale remains limited. Some research developments, however, have been successfully converted into marketable products. The main advances have been in nanoscience of cementitious and pozzolanic materials, providing an increase in the knowledge and understanding of basic phenomena in cement at the nanoscale (Scrivener and Kirkpatrick 2008; Scrivener 2009). Examples include structure and mechanical properties of the main hydrate phases, origins of cement cohesion, cement hydration, interfaces in concrete, and mechanisms of degradation. Recent innovations in instrumentation for observing and measuring at the nanoscale are providing a wealth of new and unprecedented information about concrete. This information is crucial for a better understanding of mechanisms and factors influencing performance requirements, as well as predicting the service life of concrete and providing new insights for improvement. Important summaries and compilations of nanotechnology in construction can be found in Sobolev and Ferrada-Gutiérrez (2005a), Bartos et al. (2006), de Miguel et al. (2006), Scrivener and Kirkpatrick (2008), Sobolev and Shah (2008), Sobolev et al. (2008b), Sanchez
