

RATIFICACIÓN DE DOCUMENTOS EUROPEOS JUNIO 2011

HOJA DE ANUNCIO

En cumplimiento del punto 11.2.6.4 de las Reglas Internas de CEN/CENELEC Parte 2, se ha otorgado el rango de norma española al Documento Europeo siguiente:

Documento Europeo	Título	Fecha de Disponibilidad
EN 1999-1-5:2007	Eurocódigo 9: Proyecto de estructuras de aluminio. Parte 1-5: Estructuras laminares (Ratificada por AENOR en junio de 2011.)	2007-02-28

Este anuncio causará efecto a partir del primer día del mes siguiente al de su publicación en la revista UNE. La correspondiente versión oficial de este documento se encuentra disponible en la sede de AENOR, Calle Génova 6, 28004 MADRID.

©..2007.. Derechos de reproducción reservados a los Miembros de CEN.

English Version

Eurocode 9 - Design of aluminium structures - Part 1-5: Shell structures

Eurocode 9 - Calcul des structures en aluminium - Partie 1-5 : Coques

Eurocode 9 - Bemessung und Konstruktion von Aluminiumtragwerken - Teil 1-5: Schalen

This European Standard was approved by CEN on 11 October 2006.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword	5
National Annex for EN 1999-1-5	7
1 General	8
1.1 Scope	8
1.1.1 Scope of EN 1999	8
1.1.2 Scope of EN 1999-1-5	8
1.2 Normative references	9
1.3 Terms and definitions	10
1.3.1 Structural forms and geometry	10
1.3.2 Special definitions for buckling calculations	11
1.4 Symbols	12
1.5 Sign conventions	15
1.6 Coordinate systems	15
2 Basis of design	17
2.1 General	17
2.2 Consequence class and execution class	17
3 Materials and geometry	17
3.1 Material properties	17
3.2 Design values of geometrical data	17
3.3 Geometrical tolerances and geometrical imperfections	18
4 Durability	18
5 Structural analysis	18
5.1 Geometry	18
5.2 Boundary conditions	19
5.3 Actions and environmental influences	19
5.4 Stress resultants and stresses	20
5.5 Types of analysis	20
6 Ultimate limit state	21
6.1 Resistance of cross section	21
6.1.1 Design values of stresses	21
6.1.2 Design values of resistance	22
6.1.3 Stress limitation	22
6.1.4 Design by numerical analysis	22
6.2 Buckling resistance	23
6.2.1 General	23
6.2.2 Buckling-relevant geometrical tolerances	24
6.2.3 Shell in compression and shear	25
6.2.4 Effect of welding	27
6.2.5 Design by numerical analysis	30
7 Serviceability limit states	31
7.1 General	31
7.2 Deflections	31
Annex A [normative] - Expressions for shell buckling analysis	32
A.1 Unstiffened cylindrical shells of constant wall thickness	32
A.1.1 Notations and boundary conditions	32
A.1.2 Meridional (axial) compression	32
A.1.2.1 Critical meridional buckling stresses	32

A.1.2.2	Meridional buckling parameter.....	33
A.1.3	Circumferential (hoop) compression.....	34
A.1.3.1	Critical circumferential buckling stresses.....	34
A.1.3.2	Circumferential buckling parameter.....	35
A.1.4	Shear.....	37
A.1.4.1	Critical shear buckling stresses.....	37
A.1.4.2	Shear buckling parameters.....	38
A.1.5	Meridional (axial) compression with coexistent internal pressure.....	38
A.1.5.1	Pressurised critical meridional buckling stress.....	38
A.1.5.2	Pressurised meridional buckling parameters.....	38
A.1.6	Combinations of meridional (axial) compression, circumferential (hoop) compression and shear	39
A.2	Unstiffened cylindrical shells of stepwise wall thickness.....	40
A.2.1	General.....	40
A.2.1.1	Notations and boundary conditions.....	40
A.2.1.2	Geometry and joint offsets.....	41
A.2.2	Meridional (axial) compression.....	41
A.2.3	Circumferential (hoop) compression.....	41
A.2.3.1	Critical circumferential buckling stresses.....	41
A.2.3.2	Buckling strength verification for circumferential compression.....	44
A.2.4	Shear.....	44
A.2.4.1	Critical shear buckling stress.....	44
A.2.4.2	Buckling strength verification for shear.....	45
A.3	Unstiffened lap jointed cylindrical shells.....	45
A.3.1	General.....	45
A.3.1.1	Definitions.....	45
A.3.1.2	Geometry and stress resultants.....	45
A.3.2	Meridional (axial) compression.....	45
A.3.3	Circumferential (hoop) compression.....	45
A.3.4	Shear.....	46
A.4	Unstiffened conical shells.....	46
A.4.1	General.....	46
A.4.1.1	Notation.....	46
A.4.1.2	Boundary conditions.....	46
A.4.1.3	Geometry.....	47
A.4.2	Design buckling stresses.....	47
A.4.2.1	Equivalent cylinder.....	47
A.4.3	Buckling strength verification.....	47
A.4.3.1	Meridional compression.....	47
A.4.3.2	Circumferential (hoop) compression.....	48
A.4.3.3	Shear and uniform torsion.....	48
A.5	Stiffened cylindrical shells of constant wall thickness.....	48
A.5.1	General.....	48
A.5.2	Isotropic walls with meridional stiffeners.....	48
A.5.2.1	General.....	48
A.5.2.2	Meridional (axial) compression.....	49
A.5.2.3	Circumferential (hoop) compression.....	49
A.5.2.4	Shear.....	49
A.5.3	Isotropic walls with circumferential stiffeners.....	50
A.5.4	Circumferentially corrugated walls with meridional stiffeners.....	50
A.5.4.1	General.....	50
A.5.4.2	Axial compression.....	51
A.5.4.3	Stiffened wall treated as carrying axial compression only in the stiffeners.....	52
A.5.4.4	Circumferential (hoop) compression.....	53

A.5.5	Axially corrugated walls with ring stiffeners	53
A.5.5.1	General	53
A.5.5.2	Axial compression	54
A.5.5.3	Circumferential (hoop) compression	54
A.5.6	Stiffened wall treated as an orthotropic shell	54
A.5.6.1	General	54
A.5.6.2	Axial compression	55
A.5.6.3	Circumferential (hoop) compression	56
A.5.6.4	Shear	56
A.5.7	Equivalent orthotropic properties of corrugated sheeting.....	57
A.6	Unstiffened spherical shells under uniform circumferential compression.....	58
A.6.1	Notations and boundary conditions	58
A.6.2	Critical buckling stresses.....	59
A.6.3	Circumferential buckling parameter.....	59
Annex B [informative]	- Expressions for buckling analysis of toriconical and torispherical shells.....	60
B.1	General	60
B.2	Notations and boundary conditions	60
B.3	External pressure	61
B.3.1	Critical external pressure	61
B.3.2	Uniform squash limit external pressure.....	62
B.3.3	External pressure buckling parameter	63
B.4	Internal pressure	63
B.4.1	Critical internal pressure.....	63
B.4.2	Uniform squash limit internal pressure.....	64
B.4.3	Internal pressure buckling parameter.....	65

Foreword

This European Standard (EN 1999-1-5:2007) has been prepared by Technical Committee CEN/TC250 « Structural Eurocodes », the secretariat of which is held by BSI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by August 2007, and conflicting national standards shall be withdrawn at the latest by March 2010.

This European Standard supersedes ENV 1999-1-1:1998, ENV 1999-1-2:1998 and ENV 1999-2:1998.

CEN/TC 250 is responsible for all Structural Eurocodes.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard:

Austria, Bulgaria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italia, Latvia, Lithuania, Luxemburg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom

Background of the Eurocode programme

In 1975, the Commission of the European Community decided on an action programme in the field of construction, based on article 95 of the Treaty. The objective of the programme was the elimination of technical obstacles to trade and the harmonisation of technical specifications.

Within this action programme, the Commission took the initiative to establish a set of harmonised technical rules for the design of construction works, which, in a first stage, would serve as an alternative to the national rules in force in the Member States and, ultimately, would replace them.

For fifteen years, the Commission, with the help of a Steering Committee with Representatives of Member States, conducted the development of the Eurocodes programme, which led to the first generation of European codes in the 1980s.

In 1989, the Commission and the Member States of the EU and EFTA decided, on the basis of an agreement¹ between the Commission and CEN, to transfer the preparation and the publication of the Eurocodes to the CEN through a series of Mandates, in order to provide them with a future status of European Standard (EN). This links de facto the Eurocodes with the provisions of all the Council's Directives and/or Commission's Decisions dealing with European standards (e.g. the Council Directive 89/106/EEC on construction products - CPD - and Council Directives 93/37/EEC, 92/50/EEC and 89/440/EEC on public works and services and equivalent EFTA Directives initiated in pursuit of setting up the internal market).

The Structural Eurocode programme comprises the following standards generally consisting of a number of Parts:

EN 1990	Eurocode 0:	Basis of Structural Design
EN 1991	Eurocode 1:	Actions on structures
EN 1992	Eurocode 2:	Design of concrete structures
EN 1993	Eurocode 3:	Design of steel structures
EN 1994	Eurocode 4:	Design of composite steel and concrete structures
EN 1995	Eurocode 5:	Design of timber structures
EN 1996	Eurocode 6:	Design of masonry structures
EN 1997	Eurocode 7:	Geotechnical design
EN 1998	Eurocode 8:	Design of structures for earthquake resistance
EN 1999	Eurocode 9:	Design of aluminium structures

¹ Agreement between the Commission of the European Communities and the European Committee for Standardisation (CEN) concerning the work on EUROCODES for the design of building and civil engineering works (BC/CEN/03/89).

Eurocode standards recognise the responsibility of regulatory authorities in each Member State and have safeguarded their right to determine values related to regulatory safety matters at national level where these continue to vary from State to State.

Status and field of application of Eurocodes

The Member States of the EU and EFTA recognise that Eurocodes serve as reference documents for the following purposes:

- as a means to prove compliance of building and civil engineering works with the essential requirements of Council Directive 89/106/EEC, particularly Essential Requirement No.1 – Mechanical resistance and stability, and Essential Requirement No 2 – Safety in case of fire
- as a basis for specifying contracts for the execution of construction works and related engineering services
- as a framework for drawing up harmonised technical specifications for construction products (EN's and ETA's)

The Eurocodes, as far as they concern the construction works themselves, have a direct relationship with the Interpretative Documents² referred to in Article 12 of the CPD, although they are of a different nature from harmonised product standards³. Therefore, technical aspects arising from the Eurocodes work need to be adequately considered by CEN Technical Committees and/or EOTA Working Groups working on product standards with a view to achieving full compatibility of these technical specifications with the Eurocodes.

The Eurocode standards provide common structural design rules for everyday use for the design of whole structures and component products of both a traditional and an innovative nature. Unusual forms of construction or design conditions are not specifically covered and additional expert consideration will be required by the designer in such cases.

National standards implementing Eurocodes

The National Standards implementing Eurocodes will comprise the full text of the Eurocode (including any annexes), as published by CEN, which may be preceded by a National title page and National foreword, and may be followed by a National annex [informative].

The National Annex (informative) may only contain information on those parameters which are left open in the Eurocode for national choice, known as Nationally Determined Parameters, to be used for the design of buildings and civil engineering works to be constructed in the country concerned, i.e. :

- values for partial factors and/or classes where alternatives are given in the Eurocode;
- values to be used where a symbol only is given in the Eurocode;
- geographical and climatic data specific to the Member State, e.g. snow map;
- the procedure to be used where alternative procedures are given in the Eurocode;
- references to non-contradictory complementary information to assist the user to apply the Eurocode.

Links between Eurocodes and harmonised technical specifications (EN's and ETA's) for products

There is a need for consistency between the harmonised technical specifications for construction products and the technical rules for works⁴. Furthermore, all the information accompanying the CE Marking of the construction products, which refer to Eurocodes, shall clearly mention which Nationally Determined Parameters have been taken into account.

² According to Art. 3.3 of the CPD, the essential requirements (ERs) shall be given concrete form in interpretative documents for the creation of the necessary links between the essential requirements and the mandates for harmonised ENs and ETAGs/ETAs.

³ According to Art. 12 of the CPD the interpretative documents shall :

- a) give concrete form to the essential requirements by harmonising the terminology and the technical bases and indicating classes or levels for each requirement where necessary ;
- b) indicate methods of correlating these classes or levels of requirement with the technical specifications, e.g. methods of calculation and of proof, technical rules for project design, etc. ;
- c) serve as a reference for the establishment of harmonised standards and guidelines for European technical approvals.

The Eurocodes, *de facto*, play a similar role in the field of the ER 1 and a part of ER 2.

⁴ see Art.3.3 and Art.12 of the CPD, as well as clauses 4.2, 4.3.1, 4.3.2 and 5.2 of ID 1.
