### RECONFIRMATION

#### OF

AS 2350.2—2006 Methods of testing portland, blended and masonry cements Method 2: Chemical composition

## **RECONFIRMATION NOTICE**

Technical Committee BD-010 has reviewed the content of this publication and in accordance with Standards Australia procedures for reconfirmation, it has been determined that the publication is still valid and does not require change.

Reconfirmed documents cannot be amended, but may be formally revised and a new edition published.

Certain documents referenced in the publication may have been amended since the original date of publication. Users are advised to ensure that they are using the latest versions of such documents as appropriate, unless advised otherwise in this Reconfirmation Notice.

Approved for reconfirmation in accordance with Standards Australia procedures for reconfirmation on 24 February 2016.

The following are represented on Technical Committee BD-010:

AUSTROADS Cement & Concrete Association of New Zealand Cement Concrete & Aggregates Australia Cement Concrete & Aggregates Australia – Cement Cement Concrete & Aggregates Australia – Concrete Concrete Institute of Australia Concrete Masonry Association of Australia Engineers Australia Portland Cement Association

## Australian Standard®

# Methods of testing portland, blended and masonry cements

## Method 2: Chemical composition

## 1 SCOPE

This Standard sets out the method for determining, by proven chemical methods, the required composition of cement.

1

NOTES:

- 1 The testing procedure herein may involve the use of materials or equipment that require safety measures to be observed.
- 2 This Standard does not purport to address all of the safety concerns, if any, associated with its use.
- 3 The user of this Standard should establish appropriate safety and health practices, and determine the applicability of regulatory limitations prior to use.

## **2** APPLICATION

The method of analysis chosen shall be qualified by the procedures in Clause 4, excepting those for loss on ignition and insoluble residue for which methods are set out in Clauses 5.5.2 and 5.5.3.

## **3 REFERENCED DOCUMENTS**

The following documents are referred to in this Standard:

AS	
2162	Verification and use of volumetric apparatus
2162.1	Part 1: General—Volumetric glassware
2162.2	Part 2: Guide to the use of piston-operated volumetric apparatus (POVA)
2706	Numerical values—Rounding and interpretation of limiting values
2830	Good laboratory practice
2830.1	Part 1: Chemical analysis
AS/NZS	
2350	Methods of testing portland, blended and masonry cements
2350.1	Method 1: Sampling

## **4 QUALIFICATION OF CHOSEN METHOD**

## 4.1 Principle

The chemical composition of at least four internationally accredited cement standard reference materials (SRM) shall be determined on duplicate portions using the chosen test method. The difference between duplicate values for each component and the deviation of the mean of the values from the certified value shall be compared with the figures given in Table 1. Where possible, the SRM shall be selected to cover the expected range of component percentages.
