## Preface

This Standard was prepared by Standards Australia Committee LG-006, Road Traffic Signals, to supersede AS 4192—2006.

The objective of this document is to specify requirements for the design, construction and performance of signs intended to display specific patterns of flashing yellow, circular lit elements, including arrows, typically used for the temporary diversion of vehicular traffic on roads. It specifies three sizes of signs, which are typically mounted on either a motor vehicle or trailer.

The major changes in this edition are as follows:

- (a) To allow for the use of other technologies as well as 5 mm LED.
- (b) Revision of detailed requirements for photometric and colourmetric measurements.
- (c) Re-format of document in line with new standard requirements.

The use of illuminated flashing arrow signs is subject to regulation by traffic control authorities. Guidance on their use is provided in AS 1742.3.

The terms “normative” and “informative” are used in Standards to define the application of the appendices to which they apply. A “normative” appendix is an integral part of a Standard, whereas an “informative” appendix is only for information and guidance.
