Names: Ayyub, Bilal M., editor. | American Society of Civil Engineers. Infrastructure Resilience Division.

Title: Hazard-resilient infrastructure : analysis and design / sponsored by the Infrastructure Resilience Division of ASCE ; edited by Bilal M. Ayyub, Ph.D., P.E.

Description: Reston, Virginia : American Society of Civil Engineers, [2021] | Series: ASCE manuals and reports on engineering practice ; no. 144 | Includes bibliographical references and index. | Summary: "MOP 144 provides guidance and underlying framework for creating consistency across hazards, systems, and sectors in the design of new infrastructure systems and in enhancing the resilience of existing ones"-- Provided by publisher.

Identifiers: LCCN 2021005960 | ISBN 9780784415429 (print) | ISBN 9780784415757 (paperback) | ISBN 9780784483442 (ebook) | ISBN 9780784483459 (ePub)

Subjects: LCSH: Structural design. | Structural analysis (Engineering) | Fault tolerance (Engineering) | Building failures--Prevention. | Public works--Protection. | Disasters. Classification: LCC TA658.4. H39 2021 | DDC 624.1/7--dc23

MANUALS AND REPORTS ON ENGINEERING PRACTICE

(As developed by the ASCE Technical Procedures Committee, July 1930, and revised March 1935, February 1962, and April 1982)

A manual or report in this series consists of an orderly presentation of facts on a particular subject, supplemented by an analysis of limitations and applications of these facts. It contains information useful to an average engineer in his or her everyday work, rather than findings that may be useful only occasionally or rarely. It is not in any sense a "standard," however, nor is it so elementary or so conclusive as to provide a "rule of thumb" for nonengineers.

Furthermore, material in this series, in distinction from a paper (which expresses only one person's observations or opinions), is the work of a committee or group selected to assemble and express information on a specific topic. As often as practicable, the committee is under the direction of one or more of the Technical Divisions and Councils, and the product evolved has been subjected to review by the Executive Committee of the Division or Council. As a step in the process of this review, the proposed manuscripts are often brought before the members of the Technical Divisions and Councils for comment, which may serve as the basis for improvement. When published, each manual shows the names of the committees by which it was compiled and indicates clearly the several processes through which it has passed in review, so that its merits may be definitely understood.

In February 1962 (and revised in April 1982), the Board of Direction voted to establish a series titled "Manuals and Reports on Engineering Practice" to include the manuals published and authorized to date, future Manuals of Professional Practice, and Reports on Engineering Practice. All such manual or report material of the Society would have been refereed in a manner approved by the Board Committee on Publications and would be bound, with applicable discussion, in books similar to past manuals. Numbering would be consecutive and would be a continuation of present manual numbers. In some cases of joint committee reports, bypassing of journal publications may be authorized.

A list of available Manuals of Practice can be found at http://www.asce.org/ bookstore.

DEDICATION

Richard N. Wright, Ph.D., P.E., NAE, Dist.M.ASCE May 17, 1932 to May 31, 2019

Dr. Wright was a research professor of civil and environmental engineering at the University of Maryland, College Park, the past chair of ASCE's Committee on Adaptation to a Changing Climate, a member of the ExCom of the Infrastructure Resilience Division, and a member of the ASCE Committee on Sustainability, as well as the chair of its Sustainable Infrastructure Education Subcommittee. He was a distinguished member of ASCE and a member of the National Academy of Engineering.

He received his bachelor's and master's degrees from Syracuse University and his doctorate from the University of Illinois at Urbana-Champaign, all in civil engineering. He worked as the director of the Building and Fire Research Laboratory of the National Institute of Standards and Technology (NIST) and a professor of civil engineering at the University of Illinois at Urbana-Champaign. He was the president of the International Council for Research and Innovation in Building and Construction (CIB) and the president of the Liaison Committee of International Civil Engineering Organizations.

Dr. Wright's professional honors include the Gold Medal of the Department of Commerce (1982); Federal Engineer of the Year from the National Society of Professional Engineers (1988); Mahaffey Award from the National Conference of States on Building Codes and Standards (1998); Michel Award for Industry Advancement of Research from the Civil

DEDICATION

Engineering Research Foundation (1999); election to the National Academy of Engineering (2003); International Award of the Japan Society of Civil Engineers (2003); University of Illinois, College of Engineering, Alumni Award for Distinguished Service (2006); President Medal of ASCE (2010); and the Hans Oser Standards Alumni Association Distinguished Service Award (2014).
