

Designation: A1113/A1113M – 20^{ε1}

Standard Specification for Corrugated Steel Structural Plate, Polymer-Coated, for Field-Bolted Pipe, Pipe-Arches, and Arches¹

This standard is issued under the fixed designation A1113/A1113M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

^{ε1} NOTE—Editorial corrections were made to Section 2 and Table 2 in April 2021.

1. Scope

1.1 This specification covers corrugated steel structural plate, polymer-coated, used in the construction of pipe, pipe-arches, arches, underpasses, and special shapes for field assembly. Appropriate fasteners and accessory materials are also described. The pipe, arches, and other shapes are generally used for drainage purposes, pedestrian and vehicular underpasses, and utility tunnels.

1.2 This specification does not include requirements for bedding, backfill, or the relationship between earth cover load and plate thickness of the pipe. Experience has shown that the successful performance of this product depends upon the proper selection of plate thickness, type of bedding and backfill, manufacture in the plant, and care in the installation. The purchaser must correlate the preceding factors and also the corrosion and abrasion requirements of the field installation with the plate thickness. The structural design of corrugated steel structural plate pipe and the proper installation procedures are described in Practices [A796/A796M](#) and [A807/A807M](#).

1.3 *Units*—This specification is applicable to orders in either inch-pound units (as A1113) or SI units (as A1113M). Inch-pound units and SI units are not necessarily equivalent. SI units are shown in brackets in the text, but they are the applicable values when the material is ordered to A1113M.

1.4 This specification references notes and footnotes which provide explanatory material. These notes and footnotes (excluding those in tables and figures) shall not be considered as requirements of this specification.

1.5 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.6 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

3. Terminology

3.1 Definitions of Terms Specific to This Standard:

3.1.1 *arch*, *n*—a part circle shape spanning an open invert between the footings on which it rests.

3.1.2 *box culvert*, *n*—rectangular box with a long-radius crown and short radius corners, and having either a full invert or footings.

3.1.3 *circumferential flange connection*, *n*—a circumferential seam for structural plate that is connected through a flange along the edge of the plate; circumferential flanges are cold-formed.

3.1.4 *circumferential reinforcing member*, *n*—a structural section bolted to a structural plate structure, parallel to the corrugations, to provide additional strength or stiffness.

3.1.5 *circumferential seam*, *n*—a connection seam along the edge of the plate parallel to the corrugation.

3.1.6 *fabricator*, *n*—the producer of the components for the finished product.

3.1.7 *flat plate*, *n*—sheet or plate used to fabricate structural plate.

3.1.8 *longitudinal flange connection*, *n*—a longitudinal seam for structural plate that is connected through a flange along the edge of the plate; longitudinal flanges are welded to structural plate.

3.1.9 *longitudinal seam*, *n*—a connection seam along the edge of the plate perpendicular to the corrugation.

3.1.10 *manufacturer*, *n*—the producer of the flat plate and accessories.

3.1.11 *pipe*, *n*—a conduit having full circular shape; also, in a general context, all structure shapes covered by this specification

3.1.12 *pipe-arch*, *n*—an arch shape with an approximate semicircular crown, small-radius, corners, and large-radius invert.

3.1.13 *pipe, horizontal ellipse*, *n*—an elliptically shaped pipe with the horizontal diameter approximately 25 % greater than the nominal diameter.

3.1.14 *pipe, vertically elongated*, *n*—an elliptically shaped pipe with the vertical diameter up to 10 % greater than the nominal diameter.

3.1.15 *purchaser*, *n*—the person or agency that purchases the finished pipe structure.

3.1.16 *special shape*, *n*—a shape, other than described elsewhere in this section, suitable for fabrication with structural plate.

3.1.17 *structural plate*, *n*—a corrugated and curved plate which is field assembled with other structural plates to form the required structure.

3.1.18 *vehicular underpass*, *n*—a high arch shape with an approximate semicircular crown, large-radius sides, small-radius corners between sides and invert, and large-radius invert.

4. Connection Classification

4.1 *Lapped Connections*—The corrugated steel structural plate shall be fabricated with any of the corrugations in 6.2 with bolted lap seams in both circumferential and longitudinal directions. See Fig. 1.

4.2 *Flange Connections*—The corrugated steel structural plate shall be fabricated with 15 by 5½ in. [380 by 140 mm] corrugations with bolted flange seams in both circumferential and longitudinal directions, oriented such that after curving, all flanges are on the inside of the structure. See Figs. 2-4. For arch anchorage plates, the longitudinal flange along the bottom

Note: Seam Hole Pattern Varies With Corrugation Profiles

FIG. 1 Layout of Structural Plate with Lapped Connections

edge may be omitted and bolt hole patterns furnished the same as that for structural plate with lapped connections.

5. Ordering Information

5.1 Orders for material under this specification shall include the following information as necessary to adequately describe the desired product:

5.1.1 Name of material (corrugated steel structural plate and accessories),

5.1.2 Description of structure (see Section 3),

5.1.3 Number of structures,

5.1.4 ASTM designation and year of issue, as A1113 – __ for inch-pound units or A1113M – __ for SI units.

5.1.5 Type of connections if other than lapped (see Section 4),

5.1.6 Dimensions of structure (diameter or span and rise, and length, and so forth) (see 9.2 and Note 6),

5.1.7 Thickness of plate (see 9.1), and for the 6 by 2 in. [150 by 50 mm] corrugation, the type of steel in accordance with 6.1.3 and Table 1,

5.1.8 Description of corrugations (see 7.2),

5.1.9 End treatment (bevel, skew, grade or slope corrections, or other special provision if required by the project plans or specifications),

5.1.10 Seam bolt size and number per corrugation, if different than the minimums specified (see 7.4 and Tables 2-4),

5.1.11 Special requirements (including reinforcement locations, shapes, and thicknesses), if required, and

5.1.12 Certification, if required (see 13.1).
