National foreword

This British Standard is the UK implementation of EN 14038-2:2020. It supersedes DD CEN/TS 14038-2:2011, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee GEL/603, Cathodic protection.

A list of organizations represented on this committee can be obtained on request to its committee manager.

The UK committee advises users of its concerns that this standard is insufficiently rigorous in respect of the:

- requirements to uniformly deliver charge to all areas being treated
- assessment of adequacy of charge delivered to all areas treated
- control of process parameters during application of the technique
- clarity with which the criteria of adequate treatment are detailed

Further commentary from the UK committee on the application of this standard can be found in National Annex NA.
