National foreword

This British Standard is the UK implementation of EN 1993-6:2007, incorporating corrigendum July 2009.

The start and finish of text introduced or altered by corrigendum is indicated in the text by tags. Tags altered by CENELEC corrigendum July 2009 is indicated in the text by **AC1** **AC1**.

The structural Eurocodes are divided into packages by grouping Eurocodes for each of the main materials: concrete, steel, composite concrete and steel, timber, masonry and aluminium; this is to enable a common date of withdrawal (DOW) for all the relevant parts that are needed for a particular design. The conflicting national standards will be withdrawn at the end of the co-existence period, after all the EN Eurocodes of a package are available.

Following publication of the EN, there is a period allowed for national calibration during which the National Annex is issued, followed by a further co-existence period of a maximum three years. During the co-existence period Member States will be encouraged to adapt their national provisions. At the end of this co-existence period, the conflicting parts of national standard(s) will be withdrawn.

In the UK, the following corresponding national standards are partially superseded by BS EN 1993-6:

BS 449-2:1969, *Specification for the use of structural steel in building — Metric units*

BS 2853:1957, *Specification for the design and testing of steel overhead runway beams*

BS 5950-1:2000, *Structural use of steelwork in building — Code of practice for design — Rolled and welded sections*

and based on this transition period, these standards will be withdrawn at the latest by March 2010.

The UK participation in its preparation was entrusted by Technical Committee B/525, Building and civil engineering structures, to Subcommittee B/525/32, Towers and Masts.

A list of organizations represented on this subcommittee can be obtained on request to its secretary.

Where a normative part of this EN allows for a choice to be made at the national level, the range and possible choice will be given in the normative text, and a note will qualify it as a Nationally Determined Parameter (NDP). NDPs can be a specific value for a factor, a specific level or class, a particular method or a particular application rule if several are proposed in the EN.

To enable EN 1993-6 to be used in the UK, the NDPs will be published in a National Annex, which will be made available by BSI in due course, after public consultation has taken place.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 31 July 2007

English Version

**Eurocode 3 - Design of steel structures - Part 6: Crane
supporting structures**

Eurocode 3 - Calcul des structures en acier - Partie 6:
Chemins de roulement

Eurocode 3 - Bemessung und Konstruktion von
Stahlbauten - Teil 6: Kranbahnen

This European Standard was approved by CEN on 12 June 2006.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Contents

	page
Foreword.....	4
1 General.....	7
1.1 Scope.....	7
1.2 Normative references	7
1.3 Assumptions.....	8
1.4 Distinction between principles and application rules.....	8
1.5 Terms and definitions.....	8
1.6 Symbols.....	8
2 Basis of design.....	9
2.1 Requirements	9
2.1.1 Basic requirements	9
2.1.2 Reliability management	9
2.1.3 Design working life, durability and robustness	9
2.2 Principles of limit state design	9
2.3 Basic variables	9
2.3.1 Actions and environmental influences.....	9
2.3.2 Material and product properties.....	9
2.4 Verification by the partial factor method	9
2.5 Design assisted by testing	10
2.6 Clearances to overhead travelling cranes	10
2.7 Underslung cranes and hoist blocks	10
2.8 Crane tests	10
3 Materials	11
3.1 General.....	11
3.2 Structural steels	11
3.2.1 Material properties.....	11
3.2.2 Ductility requirements	11
3.2.3 Fracture toughness.....	11
3.2.4 Through thickness properties.....	11
3.2.5 Tolerances	11
3.2.6 Design values of material coefficients.....	11
3.3 Stainless steels.....	11
3.4 Fasteners and welds.....	11
3.5 Bearings	11
3.6 Other products for crane supporting structures	12
3.6.1 General	12
3.6.2 Rail steels	12
3.6.3 Special connecting devices for rails	12
4 Durability.....	12
5 Structural analysis.....	13
5.1 Structural modelling for analysis	13
5.1.1 Structural modelling and basic assumptions	13
5.1.2 Joint modelling	13
5.1.3 Ground structure interaction	13
5.2 Global analysis	13
5.2.1 Effects of deformed geometry of the structure	13
5.2.2 Structural stability of frames	13
5.3 Imperfections	13
5.3.1 Basis	13
5.3.2 Imperfections for global analysis of frames	13
5.3.3 Imperfections for analysis of bracing systems.....	13
5.3.4 Member imperfections.....	13
5.4 Methods of analysis.....	13
5.4.1 General	13
5.4.2 Elastic global analysis	13
5.4.3 Plastic global analysis.....	13
5.5 Classification of cross-sections	14
5.6 Runway beams	14
