Building construction – Organization of information about construction works

Part 2: Framework for classification

National foreword

This British Standard is the UK implementation of EN ISO 12006-2:2020. It is identical to ISO 12006-2:2015. It supersedes BS ISO 12006-2:2015, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee B/555, Construction design, modelling and data exchange.

A list of organizations represented on this committee can be obtained on request to its secretary.

This British, European and International Standard provides a framework for the development of built environment classification systems.

It supports building information modelling (BIM) in all construction work (e.g. infrastructure, buildings and refurbishment) for briefing, design, cost management, construction, asset operation and maintenance.

Uniclass 2015 [www.thenbs.com/our-tools/uniclass-2015] has been developed in the UK to align with BS EN ISO 12006-2:2020.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
