Code of practice for

# Safety in erecting structural frames

UDC 624.072.33:624.05:614.8 - 027

## Committees responsible for this British Standard

The preparation of this British Standard was entrusted by the Civil Engineering and Building Structures Standards Committee (CSB/-) to Technical Committee CSB/42, upon which the following bodies were represented:

British Constructional Steelwork Association Ltd.

British Precast Concrete Federation Ltd.

Building Employers' Confederation

Chartered Institute of Building

Concrete Society

Construction Health and Safety Group

Federation of Civil Engineering Contractors

Health and Safety Executive

Incorporated Association of Architects and Surveyors

Institute of Clerks of Works of Great Britain Inc.

Institution of Civil Engineers

Institution of Occupational Safety and Health

Institution of Structural Engineers

**Precast Flooring Federation** 

Royal Institute of British Architects

Timber Research and Development Association

Trades Union Congress

This British Standard, having been prepared under the direction of the Civil Engineering and Building Structures Standards Committee, was published under the authority of the Board of BSI and comes into effect on 31 August 1988

#### **Foreword**

This revision of BS 5531 has been prepared under the direction of the Civil Engineering and Building Structures Standards Committee, and supersedes BS 5531:1978, which is withdrawn.

This code was originally written in 1978 against a background of concern about the number of accidents and collapses occurring during the erection of structural frames. A recurring feature in those accidents was poor practice. It was therefore considered that presenting good practices in code form would beneficially affect the future accident situation and would result in increased efficiency in the construction industry. It was considered that there were certain features of good erection practice which were common to all types of frames. This information is contained in section 3 of the code. A study of that section is a prerequisite to a proper application of the rest of the code.

Examples shown in the text are representative of acceptable practice but organizations may use their own tried techniques.

In this revision the text has been extensively altered in detail to conform with present legislation and guidance.

In addition to legislation relevant to the subject of this code and listed in section 1, clause 3, attention is also drawn to the Health and Safety Executive Guidance Notes GS 28/1-4, "Safe erection of structures".

Attention is also drawn to BS 6100 "Glossary of building and civil engineering terms".

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

#### Summary of pages

This document comprises a front cover, an inside front cover, pages i to iv, pages 1 to 36, an inside back cover and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.
