**The Canadian Standards Association (CSA)**, under whose auspices this National Standard has been produced, was chartered in 1919 and accredited by the Standards Council of Canada to the National Standards system in 1973. It is a not-for-profit, nonstatutory, voluntary membership association engaged in standards development and certification activities.

CSA standards reflect a national consensus of producers and users — including manufacturers, consumers, retailers, unions and professional organizations, and governmental agencies. The standards are used widely by industry and commerce and often adopted by municipal, provincial, and federal governments in their regulations, particularly in the fields of health, safety, building and construction, and the environment.

Individuals, companies, and associations across Canada indicate their support for CSA's standards development by volunteering their time and skills to CSA Committee work and supporting the Association's objectives through sustaining memberships. The more than 7000 committee volunteers and the 2000 sustaining memberships together form CSA's total membership from which its Directors are chosen. Sustaining memberships represent a major source of income for CSA's standards development activities.

The Association offers certification and testing services in support of and as an extension to its standards development activities. To ensure the integrity of its certification process, the Association regularly and continually audits and inspects products that bear the CSA Mark.

In addition to its head office and laboratory complex in Rexdale (Toronto), CSA has regional branch offices in major centres across Canada and inspection and testing agencies in eight countries. Since 1919, the Association has developed the necessary expertise to meet its corporate mission: CSA is an independent service organization whose mission is to provide an open and effective forum for activities facilitating the exchange of goods and services through the use of standards, certification and related services to meet national and international needs.

**The Standards Council of Canada** is the coordinating body of the National Standards system, a federation of independent, autonomous organizations working towards the further development and improvement of voluntary standardization in the national interest.

The principal objects of the Council are to foster and promote voluntary standardization as a means of advancing the national economy, benefiting the health, safety, and welfare of the public, assisting and protecting the consumer, facilitating domestic and international trade, and furthering international cooperation in the field of standards.

A National Standard of Canada is a standard which has been approved by the Standards Council of Canada and one which reflects a reasonable agreement among the views of a number of capable individuals whose collective interests provide to the greatest practicable extent a balance of representation of producers, users, consumers, and others with relevant interests, as may be appropriate to the subject in hand. It normally is a standard which is capable of making a significant and timely contribution to the national interest.

Approval of a standard as a National Standard of Canada indicates that a standard conforms to the criteria and procedures established by the Standards Council of Canada. Approval does not refer to the technical content of the standard; this remains the continuing responsibility of the accredited standards-writing organization.

Those who have a need to apply standards are encouraged to use National Standards of Canada whenever practicable. These standards are subject to periodic review; therefore, users are cautioned to obtain the latest edition from the organization preparing the standard.

The responsibility for approving National Standards of Canada rests with the  
Standards Council of Canada  
45 O'Connor Street  
Suite 1200

### **Portland Cement**

#### **1. Scope 17**

1.1 Scope 17

1.2 Types 17

#### **2. Reference Publications and Definition 17**

2.1 Reference Publications 17

2.2 Definition 18

#### **3. General Requirements 18**

3.1 Chemical Requirements 18

3.2 Physical Requirements 19

3.2.1 General 19

3.2.2 Retest 19

3.3 Uniformity Requirements 19

3.3.1 General 19

3.3.2 Time of Test 19

#### **4. Testing, Inspection, and Sampling 19**

4.1 Samples to be Tested 19

4.2 Tests by the Manufacturer 20

4.3 Tests by the Purchaser 20

4.4 Frequency of Testing 20

4.5 Optional Tests 20

4.6 Provision of Typical Test Data or Certificates 21

4.7 Test Reports 21

4.8 Inspection and Sampling — General 21

4.9 Identification of Lots and Samples 22

4.10 Type and Size of Samples 22

4.11 Frequency of Sampling 22

4.12 Methods and Equipment for Taking Single Samples 22

4.12.1 Automatic Sampling Devices 22

4.12.2 Manual Sampling of Bulk Cement 23

4.12.3 Manual Sampling of Bagged Cement 23

4.12.4 Sample Containers 23

4.13 Preparation of Composite Sample 23

4.14 Sieving 23

4.15 Splitting of Test Samples 23

#### **5. Units, Packaging, Marking, and Storage 23**

5.1 Units for Bulk Cement 23

5.2 Packaging 24

5.3 Marking 24

5.3.1 Bagged Cement 24
