# Legal Notice for Standards

Canadian Standards Association (operating as “CSA Group”) develops standards through a consensus standards development process approved by the Standards Council of Canada. This process brings together volunteers representing varied viewpoints and interests to achieve consensus and develop a standard. Although CSA Group administers the process and establishes rules to promote fairness in achieving consensus, it does not independently test, evaluate, or verify the content of standards.

## Disclaimer and exclusion of liability

This document is provided without any representations, warranties, or conditions of any kind, express or implied, including, without limitation, implied warranties or conditions concerning this document’s fitness for a particular purpose or use, its merchantability, or its non-infringement of any third party’s intellectual property rights. CSA Group does not warrant the accuracy, completeness, or currency of any of the information published in this document. CSA Group makes no representations or warranties regarding this document’s compliance with any applicable statute, rule, or regulation.

IN NO EVENT SHALL CSA GROUP, ITS VOLUNTEERS, MEMBERS, SUBSIDIARIES, OR AFFILIATED COMPANIES, OR THEIR EMPLOYEES, DIRECTORS, OR OFFICERS, BE LIABLE FOR ANY DIRECT, INDIRECT, OR INCIDENTAL DAMAGES, INJURY, LOSS, COSTS, OR EXPENSES, HOWSOEVER CAUSED, INCLUDING BUT NOT LIMITED TO SPECIAL OR CONSEQUENTIAL DAMAGES, LOST REVENUE, BUSINESS INTERRUPTION, LOST OR DAMAGED DATA, OR ANY OTHER COMMERCIAL OR ECONOMIC LOSS, WHETHER BASED IN CONTRACT, TORT (INCLUDING NEGLIGENCE), OR ANY OTHER THEORY OF LIABILITY, ARISING OUT OF OR RESULTING FROM ACCESS TO OR POSSESSION OR USE OF THIS DOCUMENT, EVEN IF CSA GROUP HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, INJURY, LOSS, COSTS, OR EXPENSES.

In publishing and making this document available, CSA Group is not undertaking to render professional or other services for or on behalf of any person or entity or to perform any duty owed by any person or entity to another person or entity. The information in this document is directed to those who have the appropriate degree of experience to use and apply its contents, and CSA Group accepts no responsibility whatsoever arising in any way from any and all use of or reliance on the information contained in this document.

CSA Group is a private not-for-profit company that publishes voluntary standards and related documents. CSA Group has no power, nor does it undertake, to enforce compliance with the contents of the standards or other documents it publishes.

## Intellectual property rights and ownership

As between CSA Group and the users of this document (whether it be in printed or electronic form), CSA Group is the owner, or the authorized licensee, of all works contained herein that are protected by copyright, all trade-marks (except as otherwise noted to the contrary), and all inventions and trade secrets that may be contained in this document, whether or not such inventions and trade secrets are protected by patents and applications for patents. Without limitation, the unauthorized use, modification, copying, or disclosure of this document may violate laws that protect CSA Group’s and/or others’ intellectual property and may give rise to a right in CSA Group and/or others to seek legal redress for such use, modification, copying, or disclosure. To the extent permitted by licence or by law, CSA Group reserves all intellectual property rights in this document.

## Patent rights

Attention is drawn to the possibility that some of the elements of this standard may be the subject of patent rights. CSA Group shall not be held responsible for identifying any or all such patent rights. Users of this standard are expressly advised that determination of the validity of any such patent rights is entirely their own responsibility.

## Authorized use of this document

This document is being provided by CSA Group for informational and non-commercial use only. The user of this document is authorized to do only the following:

If this document is in electronic form:

- load this document onto a computer for the sole purpose of reviewing it;
- search and browse this document; and
- print this document if it is in PDF format.

Limited copies of this document in print or paper form may be distributed only to persons who are authorized by CSA Group to have such copies, and only if this Legal Notice appears on each such copy.

In addition, users may not and may not permit others to

- alter this document in any way or remove this Legal Notice from the attached standard;
- sell this document without authorization from CSA Group; or
- make an electronic copy of this document.

If you do not agree with any of the terms and conditions contained in this Legal Notice, you may not load or use this document or make any copies of the contents hereof, and if you do make such copies, you are required to destroy them immediately. Use of this document constitutes your acceptance of the terms and conditions of this Legal Notice.

Visit CSA Group's policy on privacy at [www.csagroup.org/legal](https://www.csagroup.org/legal) to find out how we protect your personal information.

**Canadian Standards Association (operating as “CSA Group”)**, under whose auspices this National Standard has been produced, was chartered in 1919 and accredited by the Standards Council of Canada to the National Standards system in 1973. It is a not-for-profit, nonstatutory, voluntary membership association engaged in standards development and certification activities.

CSA Group standards reflect a national consensus of producers and users — including manufacturers, consumers, retailers, unions and professional organizations, and governmental agencies. The standards are used widely by industry and commerce and often adopted by municipal, provincial, and federal governments in their regulations, particularly in the fields of health, safety, building and construction, and the environment.

Individuals, companies, and associations across Canada indicate their support for CSA Group’s standards development by volunteering their time and skills to Committee work and supporting CSA Group’s objectives through sustaining memberships. The more than 7000 committee volunteers and the 2000 sustaining memberships together form CSA Group’s total membership from which its Directors are chosen. Sustaining memberships represent a major source of income for CSA Group’s standards development activities.

CSA Group offers certification and testing services in support of and as an extension to its standards development activities. To ensure the integrity of its certification process, CSA Group regularly and continually audits and inspects products that bear the CSA Group Mark.

In addition to its head office and laboratory complex in Toronto, CSA Group has regional branch offices in major centres across Canada and inspection and testing agencies in eight countries. Since 1919, CSA Group has developed the necessary expertise to meet its corporate mission: CSA Group is an independent service organization whose mission is to provide an open and effective forum for activities facilitating the exchange of goods and services through the use of standards, certification and related services to meet national and international needs.

For further information on CSA Group services, write to  
CSA Group  
178 Rexdale Boulevard  
Toronto, Ontario, M9W 1R3  
Canada

A National Standard of Canada is a standard developed by a Standards Council of Canada (SCC) accredited Standards Development Organization, in compliance with requirements and guidance set out by SCC. More information on National Standards of Canada can be found at [www.scc.ca](http://www.scc.ca).

SCC is a Crown corporation within the portfolio of Innovation, Science and Economic Development (ISED) Canada. With the goal of enhancing Canada's economic competitiveness and social well-being, SCC leads and facilitates the development and use of national and international standards. SCC also coordinates Canadian participation in standards development, and identifies strategies to advance Canadian standardization efforts.

Accreditation services are provided by SCC to various customers, including product certifiers, testing laboratories, and standards development organizations. A list of SCC programs and accredited bodies is publicly available at [www.scc.ca](http://www.scc.ca).

# Contents

Technical Committee on Reinforced Concrete Design	13
Preface	16
<b>1 Scope</b>	<b>17</b>
1.1 General	17
1.2 Fire resistance	17
1.3 Alternative design procedures	17
1.4 Shells and folded plates	17
1.5 Terminology	17
1.6 Units of measurement	18
<b>2 Reference publications</b>	<b>18</b>
<b>3 Definitions and symbols</b>	<b>20</b>
3.1 Definitions	20
3.2 Symbols	27
3.3 Standard notation and calculations	39
3.3.1 Standard notation for loads and resistances	39
3.3.2 Standard notation for reinforcing bars	40
3.3.3 Bar diameter for calculations	40
<b>4 General requirements</b>	<b>40</b>
4.1 Materials — Reinforcement	40
4.2 Concrete and other materials	40
4.3 Concrete quality, mixing, and placement	41
4.3.1 Quality	41
4.3.2 Mixing and placement	41
<b>5 Drawings and related documents</b>	<b>41</b>
<b>6 Formwork, falsework, embedded pipes, and construction joints</b>	<b>41</b>
6.1 General	41
6.2 Embedded pipes and openings	42
6.3 Construction joints	42
<b>7 Details of reinforcement</b>	<b>42</b>
7.1 Hooks, bends, and headed bars	42
7.1.1 General	42
7.1.2 Stirrups and ties	42
7.1.3 Crossties	42
7.1.4 Headed bars and studs	42
7.2 Placing of reinforcement	42
7.2.1 General	42
7.2.2 Draped fabric	43
7.3 Tolerances	43
7.4 Spacing of reinforcement and tendons	43

7.4.1	Bars	43
7.4.2	Bundled bars	43
7.4.3	Pretensioning tendons	44
7.4.4	Post-tensioning tendons	44
7.5	Special details for columns and walls	44
7.5.1	Offset bars	44
7.5.2	Splices and load transfer in metal cores	44
7.6	Transverse reinforcement	44
7.6.1	General	44
7.6.2	Composite columns	45
7.6.3	Prestressing tendons	45
7.6.4	Spirals for compression members	45
7.6.5	Ties for compression members	45
7.6.6	Beams and girders — Transverse reinforcement	46
7.7	Special details for beam-column connections	46
7.8	Minimum reinforcement in slabs	47
7.9	Concrete protection for reinforcement	47
<b>8</b>	<b>Design — Limit states, load combinations, and material properties</b>	<b>47</b>
8.1	Limit states	47
8.1.1	Durability	47
8.1.2	Fire resistance	48
8.1.3	Ultimate limit states	48
8.1.4	Serviceability limit states	48
8.1.5	Structural integrity	48
8.2	Loading	48
8.2.1	General	48
8.2.2	Imposed deformations	49
8.2.3	Prestress	49
8.3	Load combinations and load factors	49
8.3.1	General	49
8.3.2	Load combinations for ultimate limit states	49
8.3.3	Load combinations for serviceability limit states	49
8.4	Factored resistance	49
8.4.1	General	50
8.4.2	Factored concrete strength	50
8.4.3	Factored reinforcement and tendon force	50
8.5	Reinforcement and tendon properties for design	50
8.5.1	Design strength for reinforcement	50
8.5.2	Compression reinforcement	50
8.5.3	Stress-strain curve for reinforcement	50
8.5.4	Modulus of elasticity of reinforcement	51
8.5.5	Coefficient of thermal expansion of reinforcement	51
8.6	Concrete properties for design	51
8.6.1	Design strength of concrete	51
8.6.2	Modulus of elasticity	51
8.6.3	Concrete stress-strain relationship	52
8.6.4	Modulus of rupture of concrete	52
8.6.5	Modification factors for concrete density	52

8.6.6	Coefficient of thermal expansion of concrete	52
<b>9</b>	<b>Structural analysis and computation of deflections</b>	<b>53</b>
9.1	Methods of analysis	53
9.2	Elastic frame analysis	53
9.2.1	Stiffness	53
9.2.2	Span length	53
9.2.3	Arrangement of loads	54
9.2.4	Redistribution of moments in continuous flexural members	54
9.3	Approximate frame analysis	54
9.3.1	General	54
9.3.2	Floor and roof loads	54
9.3.3	Moment and shear coefficients	54
9.4	Analysis by strut-and-tie models	55
9.5	Finite element analysis	55
9.6	Elastic plate analysis	56
9.7	Plastic analysis	56
9.8	Control of deflections	56
9.8.1	General	56
9.8.2	One-way construction (non-prestressed)	57
9.8.3	Two-way construction (non-prestressed)	59
9.8.4	Prestressed concrete construction	59
9.8.5	Composite construction	59
<b>10</b>	<b>Flexure and axial loads</b>	<b>60</b>
10.1	General principles	60
10.1.1	General	60
10.1.2	Plane sections assumption	61
10.1.3	Maximum concrete strain	61
10.1.4	Balanced strain conditions	61
10.1.5	Tensile strength of concrete	61
10.1.6	Concrete stress-strain relationship	61
10.1.7	Equivalent rectangular concrete stress distribution	61
10.2	Flexural members — Distance between lateral supports	61
10.3	Flexural members — T-beams	62
10.4	Flexural members — Joist construction	62
10.5	Flexural members — Reinforcement	63
10.5.1	Minimum reinforcement	63
10.5.2	Limit of $c/d$ for flexural ductility	63
10.5.3	Reinforcement in T-beam flanges	63
10.6	Beams and one-way slabs — Crack control	64
10.6.1	Crack control parameter	64
10.6.2	Skin reinforcement	64
10.7	Deep flexural members	64
10.8	Design of bearing zones	65
10.9	Compression members — Reinforcement limits	65
10.10	Compression members — Resistance	65
10.11	Columns — Design dimensions	66
10.11.1	Equivalent circular column	66

10.11.2	Column built monolithically with wall	66
10.11.3	Isolated column with interlocking spirals	66
10.12	Columns — Transmission of loads through floor system	67
10.13	Slenderness effects — General	67
10.14	Member properties for computation of slenderness effects	67
10.14.1	General	67
10.14.2	Radius of gyration	68
10.14.3	Unsupported length of compression members	68
10.14.4	Designation as non-sway	68
10.14.5	Columns in non-sway frames or storeys	69
10.14.6	Columns in sway frames or storeys	69
10.15	Slenderness effects — Non-sway frames	69
10.15.1	Effective length factor	69
10.15.2	Non-sway frames	69
10.15.3	Member stability effect	69
10.16	Slenderness effects — Sway frames	70
10.16.1	Effective length factor	70
10.16.2	End moments	70
10.16.3	Calculation of $\delta_s M_s$	71
10.16.4	Slenderness limit	71
10.16.5	Strength and stability checks	71
10.16.6	Moment magnification for flexural members	72
10.17	Composite columns — General	72
10.18	Composite column with spiral reinforcement	73
10.19	Composite column with tie reinforcement	73
<b>11</b>	<b>Shear and torsion</b>	<b>74</b>
11.1	General	74
11.1.1	Flexural regions	74
11.1.2	Regions near discontinuities	74
11.1.3	Interface regions	74
11.1.4	Slabs and footings	74
11.1.5	Alternative methods	74
11.2	Design requirements	74
11.2.1	Tension due to restraint	74
11.2.2	Variable depth members	74
11.2.3	Openings	75
11.2.4	Types of shear reinforcement	75
11.2.5	Anchorage of shear reinforcement	75
11.2.6	Types of torsion reinforcement	75
11.2.7	Anchorage of torsion reinforcement	75
11.2.8	Minimum shear reinforcement	75
11.2.9	Consideration of torsion	76
11.2.10	Effective web width	77
11.2.11	Reduced prestress in transfer length	77
11.2.12	Hanger reinforcement for beams supporting other beams	77
11.2.13	Termination of longitudinal reinforcement in flexural tension zones	78
11.3	Design for shear and torsion in flexural regions	79
11.3.1	Required shear resistance	79

11.3.2	Sections near supports	79
11.3.3	Factored shear resistance	79
11.3.4	Determination of $V_c$	79
11.3.5	Determination of $V_s$	79
11.3.6	Determination of $\beta$ and $\theta$	80
11.3.7	Proportioning of transverse reinforcement	82
11.3.8	Maximum spacing of transverse reinforcement	82
11.3.9	Proportioning of longitudinal reinforcement	82
11.3.10	Sections subjected to combined shear and torsion	83
11.4	Strut-and-tie model	84
11.4.1	Structural idealization	84
11.4.2	Proportioning of strut	86
11.4.3	Proportioning of ties	88
11.4.4	Proportioning of node regions	89
11.4.5	Crack control reinforcement	89
11.5	Interface shear transfer	89
11.5.1	General	89
11.5.2	Values of $c$ and $\mu$	90
11.5.3	Alternative equation for shear stress resistance	90
11.5.4	Values of $\sigma$ and $\rho_v$	90
11.5.5	Inclined shear friction reinforcement	91
11.5.6	Anchorage of shear friction reinforcement	91
11.6	Special provisions for brackets and corbels	91
11.7	Shear in joints	91
<b>12</b>	<b>Development and splices of reinforcement</b>	<b>92</b>
12.1	Development of reinforcement — General	92
12.2	Development of deformed bars and deformed wire in tension	92
12.2.1	Minimum development length	92
12.2.2	General development length equation	92
12.2.3	Simplified development length equations	92
12.2.4	Modification factors	93
12.2.5	Excess reinforcement	93
12.3	Development of deformed bars in compression	93
12.3.1	Development length	93
12.3.2	Basic development length	93
12.3.3	Modification factors	93
12.4	Development of bundled bars	94
12.5	Development of standard hooks in tension	94
12.5.1	Tension development length	94
12.5.2	Basic development length	94
12.5.3	Factors modifying hook development length	94
12.5.4	Confinement of hooks	94
12.5.5	Development of bars in compression	94
12.6	Mechanical anchorage	95
12.7	Development of welded deformed wire fabric in tension	95
12.8	Development of welded smooth wire fabric in tension	95
12.9	Development of pretensioned strand	96
12.10	Development of flexural reinforcement — General	96
