

DIN EN 17397-1

ICS 93.100

**Railway applications –
 Rail defects –
 Part 1: Rail defect management;
 English version EN 17397-1:2020,
 English translation of DIN EN 17397-1:2021-03**

Bahnanwendungen –
 Schienenfehler –
 Teil 1: Handhabung von Schienenfehlern;
 Englische Fassung EN 17397-1:2020,
 Englische Übersetzung von DIN EN 17397-1:2021-03

Applications ferroviaires –
 Défaits de rails –
 Partie 1: Gestion des défauts de rails;
 Version anglaise EN 17397-1:2020,
 Traduction anglaise de DIN EN 17397-1:2021-03

Document comprises 71 pages

Translation by DIN-Sprachendienst.

In case of doubt, the German-language original shall be considered authoritative.

A comma is used as the decimal marker.

National foreword

This document (EN 17397-1:2020) has been prepared by Technical Committee CEN/TC 256 “Railway applications” (Secretariat: DIN, Germany).

The responsible German body involved in its preparation was *DIN-Normenausschuss Fahrweg und Schienenfahrzeuge* (DIN Standards Committee Railway), Subcommittee NA 087-00-01-12 UA “Monitoring and treatment of rails”.

The DIN document corresponding to the document referred to in this document is as follows:

ISO 31000:2018

DIN ISO 31000:2018-10

For current information on this document, please go to DIN’s website (www.din.de) and search for the document number in question.

National Annex NA (informative)

This European Standard was approved by CEN on 28 September 2020.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document (EN 17397-1:2020) has been prepared by Technical Committee CEN/TC 256 “Railway applications”, the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by May 2021, and conflicting national standards shall be withdrawn at the latest by May 2021.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

1 Scope

This document specifies the defect management system the infrastructure manager uses to control the risk of severe accidents due to degradation of internal or surface defects on rails complying with EN 13674-1, EN 13674-2, EN 13674-4 and EN 15689:2009 (excluding grooved rails EN 14811 — which need alternative systems).

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 16729-3:2018, *Railway applications - Infrastructure - Non-destructive testing on rails in track - Part 3: Requirements for identifying internal and surface rail defects*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>

3.1 plain rail

zone comprising all parts of the rail located away from the rail ends and the welding zones

3.2 rail end

part of the rail located within the length of the fishplates

3.3 welding zone

weld material itself plus 20 mm from each end of the weld collar (for aluminothermic welding and electric arc welding) or upset (flash-butt welding)

Note 1 to entry: Any defect occurring in this zone is classified as a welding defect.

3.4 defective rail

rail which, for reasons of integrity or profile (including wear), requires management (examples in Annex A)

3.5 damaged rail

rail which is neither cracked nor broken, but which has other defects

3.6 cracked area

part of the rail with a localized material discontinuity

3.7

broken rail

rail which has separated into two or more pieces (see Figure 1 and Figure 2) or any rail from which a piece of metal becomes detached from the rail head, with a gap of more than 50 mm in length and more than 10 mm in depth resulting in a running band less than 30 mm in width (see Figure 3)

Figure 1 — Example of a broken rail separated in two pieces

Key

l horizontal length

Figure 2 — Example of a broken rail with a gap at the rail end

Key

a vertical depth

l horizontal length

c non-cracked area

Figure 3 — Example of a broken rail with a gap

3.8

rail surface defect

defect which initiates on any of the surfaces of the rail

3.9

rail head surface defect

defect which initiates on or within 5 mm from the running surface of the rail

3.10

rail internal defect

defect which initiates from within the rail section but may grow to become visible on the rail surface

3.11

NDT Method

discipline applying a physical principle in non-destructive testing

[SOURCE: EN 13938-5:2004, definition 3.2]

EXAMPLE: Ultrasonic testing.

3.12

wheel/rail interaction

effect of rolling and sliding contact and direct forces from the vehicle wheels which can cause damage to the rail

3.13

environmental degradation

damage to the rail caused by external environmental factors

3.14

geometrical planes of the rail

see EN 16729-3:2018, 3.10, Figure 4

3.15

infrastructure manager [IM]

body or organisation responsible in particular for establishing and maintaining railway infrastructure, as well as for operating the control and safety systems

3.16

track maintenance engineer [TME]

engineer with “safety of line” responsibility for a defined track area
