

DIN EN 1995-2

ICS 91.010.30; 91.080.20

Supersedes
DIN EN 1995-2:2006-02;
partially supersedes
DIN 1074:2006-09

**Eurocode 5: Design of timber structures –
Part 2: Bridges
English translation of DIN EN 1995-2:2010-12**

Eurocode 5: Bemessung und Konstruktion von Holzbauten –
Teil 2: Brücken

Englische Übersetzung von DIN EN 1995-2:2010-12

Eurocode 5: Conception et calcul des structures en bois –
Partie 2: Ponts

Traduction anglaise de DIN EN 1995-2:2010-12

Document comprises 31 pages

Translation by DIN-Sprachendienst.

In case of doubt, the German-language original shall be considered authoritative.

A comma is used as the decimal marker.

National foreword

This standard has been prepared by Technical Committee CEN/TC 250 “Structural Eurocodes” (Secretariat: BSI, United Kingdom).

The responsible German body involved in its preparation was the *Normenausschuss Bauwesen* (Building and Civil Engineering Standards Committee), Working Committee NA 005-04-01 AA *Holzbau*.

EN 1995-2:2004 was approved by CEN on 26 August 2004.

This European Standard is part of a series of standards dealing with structural design (Eurocodes) which are intended to be used as a “package”. In Guidance Paper L on the application and use of Eurocodes, issued by the EU Commission, reference is made to transitional periods for the introduction of the Eurocodes in the Member states. The transitional periods are given in the Foreword of this standard.

In Germany, this standard is to be applied in conjunction with the National Annex.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. DIN [and/or DKE] shall not be held responsible for identifying any or all such patent rights.

Amendments

This standard differs from DIN V ENV 1995-2:1999-08 as follows:

- a) the prestandard status has been changed to that of a full standard;
- b) the comments received from the national member bodies of CEN have been taken into account and the standard has been completely revised;
- c) the terminology of DIN 1074:2006-09 has been largely adopted

Compared with DIN EN 1995-2:2006-02 and DIN 1074:2006-09, the following corrections have been made:

- a) the standard has been based on European design rules;
- b) superseding notes have been corrected;
- c) the standard has been editorially revised.

Previous editions

DIN 1074: 1930-08, 1941x-08, 1991-05, 2006-09

English version

Eurocode 5: Design of timber structures — Part 2: Bridges

Eurocode 5: Conception et calcul des structures en bois —
Partie 2: Ponts

Eurocode 5: Bemessung und Konstruktion von
Holzbauten — Teil 2: Brücken

This European Standard was approved by CEN on 26 August 2004.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Contents

Foreword	3
Section 1 General	6
1.1 Scope	6
1.1.1 Scope of EN 1990	6
1.1.2 Scope of EN 1995-2	6
1.2 Normative references	6
1.3 Assumptions	7
1.4 Distinction between principles and application rules	7
1.5 Definitions	7
1.5.1 General	7
1.5.2 Additional terms and definitions used in this present standard	7
1.6 Symbols used in EN 1995-2	9
Section 2 Basis of design	11
2.1 Basic requirements	11
2.2 Principles of limit state design	11
2.3 Basic variables	11
2.3.1 Actions and environmental influences	11
2.4 Verification by the partial factor method	11
2.4.1 Design value of material property	11
Section 3 Material properties	13
Section 4 Durability	14
4.1 Timber	14
4.2 Resistance to corrosion	14
4.3 Protection of timber decks from water by sealing	14
Section 5 Basis of structural analysis	15
5.1 Laminated deck plates	15
5.1.1 General	15
5.1.2 Concentrated vertical loads	15
5.1.3 Simplified analysis	16
5.2 Composite members	17
5.3 Timber-concrete composite members	17
Section 6 Ultimate limit states	18
6.1 Deck plates	18
6.1.1 System strength	18
6.1.2 Stress-laminated deck plates	19
6.2 Fatigue	21
Section 7 Serviceability limit states	22
7.1 General	22
7.2 Limiting values for deflections	22
7.3 Vibrations	22
7.3.1 Vibrations caused by pedestrians	22
7.3.2 Vibrations caused by wind	22
Section 8 Connections	23
8.1 General	23
8.2 Timber-concrete connections in composite beams	23
8.2.1 Laterally loaded dowel-type fasteners	23
8.2.2 Grooved connections	23
Section 9 Structural detailing and control	24
Annex A (informative) Fatigue verification	25
A.1 General	25
A.2 Fatigue loading	25
A.3 Fatigue verification	26
Annex B (informative) Vibrations caused by pedestrians	28
B.1 General	28
B.2 Vertical vibrations	28
B.3 Horizontal vibrations	28
