April 2022

DIN EN 13791/A20

ICS 91.080.40

Modifies
DIN EN 13791:2020-02

Assessment of in-situ compressive strength in structures and precast concrete components; Amendment A20, English translation of DIN EN 13791/A20:2022-04

Bewertung der Druckfestigkeit von Beton in Bauwerken und in Bauwerksteilen; Änderung A20,
Englische Übersetzung von DIN EN 13791/A20:2022-04

Évaluation de la résistance à la compression sur site des structures et des éléments préfabriqués en béton; Amendement A20,
Traduction anglaise de DIN EN 13791/A20:2022-04

Document comprises 19 pages

Foreword **4**

Introduction **5**
NA.1 Scope **6**
NA.2 Normative references **6**
NA.3 Terms and definitions, symbols and abbreviations **7**
NA.3.1 Terms and definitions **7**
NA.3.2 Symbols and abbreviations **7**
NA.5 Test regions, test locations and number of tests **8**
NA.5.2 Test locations **8**
NA.6 Core testing and the determination of the in situ compressive strength **8**
NA.7 Initial evaluation of the data set **9**
NA.7.2 Evaluation of individual test results within a test region **9**
NA.8 Estimation of compressive strength for structural assessment of an existing structure **9**
NA.8.1 Based only on core test data **9**
NA.8.2 Based on a combination of indirect test data and core test data **11**
NA.8.3 Use of indirect testing with at least three core test data **12**
NA.8.4 Assessment of compressive strength class of concrete **12**
NA.8.5 Rebound test without correlation with core strength **14**
NA.9 Assessment of compressive strength class of concrete in case of doubt **16**
NA.9.1 General **16**
NA.9.4 Screening test using a general or specific relationship with an indirect test procedure **17**
NA.9.6 Reference line W for determining a correlation with indirect tests **17**

Bibliography **19**

Figures

Figure NA.1 — Procedure for the assessment of characteristic in situ compressive strength as a function of the sample size and the standard deviation **10**

Figure NA.2 — Example of plotting the reference line W **18**

Tables

Table NA.1 — Minimum number — *n* of cores for limited test regions **10**

Table NA.2 — Factor k_3 ..... **11**

Table NA.3 — Values — k_n for characteristic values (5 % fractile) **11**

Table NA.4 — Characteristic minimum in situ compressive strength $f_{ck,is}$ of normal and high-strength concrete for compressive strength classes as in DIN EN 206-1:2001-07 ..... **13**

Table NA.5 — Characteristic minimum in situ compressive strength $f_{ck,is}$ of joint-sealed lightweight concrete for the respective compressive strength classes as in DIN EN 206-1:2001-07 ..... **14**

Table NA.6 — Rebound numbers R and comparable compressive strengths as in DIN EN 206-1:2001-07 and DIN 1045-2:2008-08 ..... **15**

Table NA.7 — Energy or velocity difference Q and comparable compressive strengths as in DIN EN 206-1:2001-07 and DIN 1045-2:2008-08 ..... **16**

Table NA.8 — Minimum required correlation coefficient **18**
