Foreword

This document has been prepared by Working Committee NA 005-52-22 AA *Konstruktiver baulicher Brandschutz* (which deals with some fields covered by CEN/TC 250) of the *Normenausschuss Bauwesen* (Building and Civil Engineering Standards Committee).

This document is the National Annex to DIN EN 1992-1-2:2010-12 *Eurocode 2: Design of concrete structures — Part 1-2: General rules — Structural fire design*.

European Standard EN 1992-1-2:2004 allows national safety parameters, referred to as Nationally Determined Parameters (NDPs), to be specified for a number of points. The NDPs cover alternative verification methods, the provision of individual values and the selection of classes from designated classification systems. The relevant parts of the text are identified in the European Standard by references to the possibility of national choice and are listed in Clause NA.2.1.

This National Annex also includes non-contradictory complementary information (NCI) that is permitted by the European Commission's Guidance Paper L "Application and use of Eurocodes", and provisions for the application of DIN EN 1992-1-2:2010-12.

The provisions of this National Annex are based on investigations made and on the results of fire design analyses in accordance with DIN 4102-4, and are intended to maintain the national safety level in terms of fire safety.

This National Annex is an integral part of DIN EN 1992-1-2:2010-12.

Annex AA below is normative.
