Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 1920-9 was prepared by Technical Committee ISO/TC 71, *Concrete, reinforced concrete and pre-stressed concrete*, Subcommittee SC 1, *Test methods for concrete*.

ISO 1920 consists of the following parts, under the general title *Testing of concrete*:

- *Part 1: Sampling of fresh concrete*
 - *Part 2: Properties of fresh concrete*
 - *Part 3: Making and curing test specimens*
 - *Part 4: Strength of hardened concrete*
 - *Part 5: Properties of hardened concrete other than strength*
 - *Part 6: Sampling, preparing and testing of concrete cores*
 - *Part 7: Non-destructive tests on hardened concrete*
 - *Part 8: Determination of drying shrinkage of concrete for samples prepared in the field or in the laboratory*
 - *Part 9: Determination of creep of concrete cylinders in compression*
- The following part is under preparation:
- *Part 10: Determination of static modulus of elasticity in compression*
