<b>Foreword</b>	<b>v</b>
<b>Introduction</b>	<b>vi</b>
<b>1 Scope</b>	<b>1</b>
1.1 General	1
1.2 Relationship with ISO 3010	1
1.3 Components requiring evaluation	1
1.4 Components excluded	2
<b>2 Normative references</b>	<b>2</b>
<b>3 Terms and definitions</b>	<b>2</b>
<b>4 Symbols and abbreviated terms</b>	<b>3</b>
<b>5 Seismic design objectives and performance criteria</b>	<b>4</b>
<b>6 Sources of seismic demand on NSCS</b>	<b>5</b>
6.1 General	5
6.2 Inertial demand	5
6.3 Relative displacement demand	5
6.4 Impact demand	6
<b>7 General conditions for determining seismic demand on NSCS</b>	<b>6</b>
7.1 General	6
7.2 Determining seismic demand assuming NSCS does not influence building response	6
7.3 Determining seismic demands assuming NSCS influences building response	7
<b>8 Quantification of elastic seismic demand on NSCS</b>	<b>7</b>
8.1 General	7
8.2 Inertial force demands determined by dynamic analysis	7
8.3 Inertial elastic force demands determined by equivalent static analysis	8
8.4 Seismic relative displacement demands	10
8.5 Impact demand	11
<b>9 Verification of NSCS</b>	<b>11</b>
9.1 Performance acceptance criteria	11
9.2 Verification by design analysis	12
9.3 Verification by seismic qualification testing	13
9.4 Verification by documented performance in past earthquakes (experience data)	15
9.5 Verification by a combination of procedures	15
<b>10 Verification of seismic load path between NSCS and building structural system</b>	<b>15</b>
<b>11 Quality assurance and enforcement</b>	<b>16</b>
<b>Annex A (informative) Identification of NSCS requiring seismic evaluation</b>	<b>17</b>
<b>Annex B (informative) Principles for choosing importance factors for NSCS</b>	<b>20</b>
<b>Annex C (informative) Principles for choosing the floor response amplification factor (height factor)</b>	<b>22</b>
<b>Annex D (informative) Principles for choosing the component amplification factor (resonance factor)</b>	<b>24</b>
<b>Annex E (informative) Principles for determining response modification factors</b>	<b>26</b>
<b>Annex F (informative) Principles for determining seismic relative displacements for drift-sensitive components</b>	<b>27</b>
<b>Annex G (informative) Floor response spectra</b>	<b>29</b>
<b>Annex H (informative) Methods for verifying NSCS by design analysis</b>	<b>32</b>

<b>Annex I</b> (informative) <b>NSCS verification by shake table testing</b> .....	<b>35</b>
<b>Annex J</b> (informative) <b>NSCS verification through use of experience data</b> .....	<b>37</b>
<b>Annex K</b> (informative) <b>Principles of seismic anchorage of NSCS</b> .....	<b>38</b>
<b>Annex L</b> (informative) <b>Quality assurance in design and construction</b> .....	<b>42</b>
<b>Bibliography</b> .....	<b>43</b>

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2. [www.iso.org/directives](http://www.iso.org/directives)

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received. [www.iso.org/patents](http://www.iso.org/patents)

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

The committee responsible for this document is ISO/TC 98, *Bases for design of structures*, Subcommittee SC 3, *Loads, forces and other actions*
