Foreword	v
Introduction.....	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 General framework of risk assessment of systems involving structures.....	4
4.1 Overview of risk management of systems involving structures.....	4
4.2 Applicability of risk assessment.....	6
5 Establishment of structural engineering context	6
5.1 Structural-engineering context.....	6
5.2 Establishment of design basis.....	7
5.3 Assessment of existing structures.....	7
5.4 Assessment of exceptional structures or extraordinary events.....	7
5.5 Preparation of risk information for decision	7
6 Definition of system	8
6.1 Representation of the system	8
6.2 Identification of the subsystems	8
7 Identification of hazards and consequences.....	8
7.1 Identification of possible hazards	8
7.2 Identification of extent of scenarios	8
7.3 Identification of consequences.....	8
7.4 Hazard screening.....	8
8 Risk estimation	9
8.1 Types of risk estimation	9
8.2 Data for estimation	10
8.3 Risk representation	10
8.4 Estimation of probability	10
8.5 Estimation of consequence.....	11
8.6 Risk calculation	11
8.7 Sensitivity analysis	11
9 Risk evaluation	11
9.1 Risk acceptance	11
9.2 Risk criteria	12
10 Evaluation of options for risk treatment	12
10.1 General	12
10.2 Determination of options	12
10.3 Assessment of options for risk treatment	13
10.4 Implementation of risk treatment.....	13
11 Report	13
Annex A (informative) Principles of risk assessment	14
Annex B (informative) Examples of extraordinary events and exceptional structures for risk assessment	18
Annex C (informative) Techniques for treatment of expert opinions	20
Annex D (informative) Examples of quantitative risk representation.....	23

Annex E (informative) **Equations for risk estimation**.....27

Annex F (informative) **Procedure for the estimation of consequences**.....31

Annex G (informative) **Examples of measures for risk treatment**33

Annex H (informative) **Examples of application of risk acceptance and optimization**36

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 13824 was prepared by Technical Committee ISO/TC 98, *Bases for design of structures*, Subcommittee SC 2, *Reliability of structures*.
