

## JAPANESE INDUSTRIAL STANDARD

Translated and Published by Japanese Standards Association

JIS A 1492:2006

(JTCCM/JSA)

Measurement of thermal transmittance for projecting windows and other roof windows

## Foreword

This translation has been made based on the original Japanese Industrial Standard established by the Minister of Economy, Trade and Industry through deliberations at the Japanese Industrial Standards Committee as the result of proposal of establishing a Japanese Industrial Standard from Japan Testing Center for Construction Materials (JTCCM)/Japanese Standards Association (JSA), with a draft being attached, based on the provision of Article 12 Clause 1 of the Industrial Standardization Law.

This Standard has been made based on ISO 12567-2:2005 Thermal performance of windows and doors—Determination of thermal transmittance by hot box method—Part 2: Roof windows and other projecting windows for the purpose of making it easier to compare this Standard with International Standard; to prepare Japanese Industrial Standard conforming with International Standard; and to propose a draft of an International Standard which is based on Japanese Industrial Standard.

Attention is drawn to the possibility that some parts of this Standard may conflict with a patent right, application for a patent after opening to the public, utility model right or application for registration of utility model after opening to the public which have technical properties. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying the patent right, application for a patent after opening to the public, utility model right or application for registration of utility model after opening to the public which have the said technical properties.

Date of Establishment: 2006-04-20

Date of Public Notice in Official Gazette: 2006-04-20
